TOPIC: Working from Home – A challenge overcome by an engineering consulting company

Speaker:

Mr. Jovan Kovacevic, P.Eng.

ZE Power Engineering Inc.

Synopsis

2020 has brought unprecedented challenges with the onset of COVID 19, affecting everyone on a personal and professional level. Many companies around the globe have been forced to move, for the first time, to an entirely remote working environment. That unexpected change demanded innovation across many levels, including technology, communication, HR, performance monitoring, and safety; all under a usual expectation of uninterrupted delivery of services. This presentation describes the perspective of one medium-size engineering consulting firm based in Western Canada, that successfully made the transition to working remotely without compromising on its commitment to its clients, or on the morale of its team members. The presenter will share a few examples of the challenges the company faced, and how they were overcome

Biography

Mr. Jovan Kovacevic is a registered Professional Engineer with Engineers and GeoScientists of BC. He is a graduate in mechanical engineering from the University of British Columbia. He has more than 15 years' professional experience at engineering positions in the consulting sector currently working as Vice President – Engineering at ZE Power Engineering, a leading engineering consulting company in Western Canada. Jovan's technical expertise – combined with a strong understanding of industry standards – ensures quality engineering solutions. He brings extensive underground and overhead design experience encompassing residential systems, feeders, duct banks, non-standard structures, and crossings. Jovan also has transmission, substation, and project management experience. His diverse set of skills and collective experience contribute to the successful development of the company. Jovan is heavily involved in professional activities including mentoring junior professionals both in and out of the workplace, representing his company in IEEE career nights, and as a judge at IMechE's Speak Out for Engineering competitions
